

Studies on interference effects of flavor changing neutral currents in the top sector (tu_γ, tc_γ couplings)

Salvatore La Cagnina

Technische Universität Dortmund, Lehrstuhl EIV

October 24, 2017

Productions:

- Production mode sample:
 - generate $p p \rightarrow t \bar{a}$, add $p p \rightarrow t u \bar{a}$ + anti-particle processes
- Decay mode sample:
 - generate $p p \rightarrow t \bar{t}$, $\bar{t} \rightarrow a u$ (will be changed to $p p \rightarrow t \bar{t} \rightarrow t a u$ due to MadSpin errors)
- Interference Sample:
 - generate $p p \rightarrow t \bar{a}$, add $p p \rightarrow t u \bar{a}$ + anti-particle processes

Creation of following plots:

- TopFCNC Model in MadGraph@NLO
- 50k Events for each generated sample
- Showering using Pythia 8
- DELPHES with ATLAS card as basic detector simulation
- Look at bJet, Photon, W Boson and Top Quark p_T , mass, η , ϕ distributions
