Productions:

- Production mode sample:
- generate p p > t a \$\$ t$\sim$, add p p > t u$\sim$ a \$\$ t + anti-particle processes
- Decay mode sample:
- generate p p > t t$\sim$ > t a u$\sim$ + anti-particle process (causes weird TopEta behaviour)
- Interference Sample:
- generate p p > t a, add p p > t u$\sim$ a + anti-particle processes

Creation of following plots:

- TopFCNC Model in MadGraph@NLO
- 50k Events for each generated sample
- Showering using Pythia 8
- DELPHES with ATLAS card as basic detector simulation
- Look at bJet, Photon, W Boson and Top Quark p_T, mass, η, ϕ distributions
- Including ΔR and invariant Masses of sub systems ($t\gamma, b\gamma, W\gamma,...$)
